Edetate Calcium Disodium, Calcium EDTA injection

MEDICATION GUIDE

NOTE: This sheet is a summary. It may not cover all possible information. If you have questions about this medicine talk to your doctor, pharmacist, or health care provider.

What is this medicine?
CALCIUM EDTA (KAL see um) binds with heavy metals in the body. It is used to treat lead poisoning.

This medicine may be used for other purposes; ask your health care provider or pharmacist if you have questions.

How should I use this medicine?
This medicine is for injection into a muscle or a vein. It is given by a health care professional in a hospital or clinic setting.
Talk to your pediatrician regarding the use of this medicine in children. Special care may be needed.

Overdosage: If you think you have taken too much of this medicine contact a poison control center or emergency room at once.

NOTE: This medicine is only for you. Do not share this medicine with others.

What if I miss a dose?
This does not apply.

What should I tell my health care provider before I take this medicine?
They need to know if you have any of these conditions:
• Kidney disease or problems passing urine

• Liver disease
• An unusual or allergic reaction to calcium EDTA, other medicines, foods, dyes, or preservatives
• Pregnant or trying to get pregnant
• Breast-feeding

What may interact with this medicine?
• Insulin with zinc
• Steroid medicines like prednisone or cortisone
• Zinc salts

This list may not describe all possible interactions. Give your health care provider a list of all the medicines, herbs, non-prescription drugs, or dietary supplements you use. Also tell them if you smoke, drink alcohol, or use illegal drugs. Some items may interact with your medicine.

What side effects may I notice from receiving this medicine?

Side effects that you should report to your doctor or health care professional as soon as possible:
• Allergic reactions like skin rash, itching or hives, swelling of the face, lips, or tongue
• Cloudy or dark urine
• Fast, irregular heartbeat
• Fever, chills
• Increased thirst
• Low blood pressure
• Numb, tingling pain
• Tremors
• Trouble passing urine or change in the amount of urine
• Unusually tired or weak

Side effects that usually do not require medical attention (report to your doctor or health care professional if they continue or are bothersome):
• Aches and pains
• Headache
• Loss of appetite
• Nausea, vomiting
• Pain at site where injected
• Runny nose, sneezing
• Watery eyes

This list may not describe all possible side effects. Call your
doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

What should I watch for while using this medicine?
Your condition will be monitored carefully while you are receiving this medicine. If you do not produce any urine for 12 hours tell your doctor right away.

Where should I keep my medicine?
This drug is given in a hospital or clinic and will not be stored at home.

NOTE: This sheet is a summary. It may not cover all possible information. If you have questions about this medicine, talk to your doctor, pharmacist, or health care provider.
