What is this medicine?
FAMOTIDINE [fa MOE ti deen] is a type of antihistamine that blocks the release of stomach acid. It is used to treat stomach or intestinal ulcers. It can relieve ulcer pain and discomfort, and the heartburn from acid reflux.

This medicine may be used for other purposes; ask your health care provider or pharmacist if you have questions.

How should I use this medicine?
This medicine is for infusion into a vein. It is given by a health care professional in a hospital or clinic setting.

Talk to your pediatrician regarding the use of this medicine in children. Special care may be needed.

Overdosage: If you think you have taken too much of this medicine contact a poison control center or emergency room at once.

NOTE: This medicine is only for you. Do not share this medicine with others.

What if I miss a dose?
This does not apply.

What should I tell my health care provider before I take this medicine?
They need to know if you have any of these conditions:
• Kidney or liver disease
• An unusual or allergic reaction to famotidine, other medicines, foods, dyes, or preservatives

• Pregnant or trying to get pregnant
• Breast-feeding

What may interact with this medicine?
• Delavirdine
• Itraconazole
• Ketoconazole

This list may not describe all possible interactions. Give your health care provider a list of all the medicines, herbs, non-prescription drugs, or dietary supplements you use. Also tell them if you smoke, drink alcohol, or use illegal drugs. Some items may interact with your medicine.

What side effects may I notice from receiving this medicine?
Side effects that you should report to your doctor or health care professional as soon as possible:
• Allergic reactions like skin rash, itching or hives, swelling of the face, lips, or tongue
• Agitation, nervousness
• Confusion
• Hallucinations

Side effects that usually do not require medical attention (report to your doctor or health care professional if they continue or are bothersome):
• Constipation
• Diarrhea
• Dizziness
• Headache

This list may not describe all possible side effects. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

What should I watch for while using this medicine?
Tell your doctor or health care professional if your condition does not start to get better or gets worse.

Do not take with aspirin, ibuprofen, or other antiinflammatory medicines. These can aggravate your condition.

Do not smoke cigarettes or drink alcohol. These increase irritation in your stomach and can increase the time it will take for ulcers to heal. Cigarettes and alcohol can also worsen acid
reflux or heartburn.
If you get black, tarry stools or vomit up what looks like coffee grounds, call your doctor or health care professional at once. You may have a bleeding ulcer.

Where should I keep my medicine?
This medicine is given in a hospital or clinic. You will not be given this medicine to store at home.

NOTE: This sheet is a summary. It may not cover all possible information. If you have questions about this medicine, talk to your doctor, pharmacist, or health care provider.
