Fluphenazine HCl injection
MEDICATION GUIDE

NOTE: This sheet is a summary. It may not cover all possible information. If you have questions about this medicine talk to your doctor, pharmacist, or health care provider.

What is this medicine?
FLUPHENAZINE (floo FEN a zeen) is used to treat the symptoms of schizophrenia and other mental disorders. Not all fluphenazine injections are the same. Do not change the brand you are using without checking with your doctor or health care professional.

This medicine may be used for other purposes; ask your health care provider or pharmacist if you have questions.

How should I use this medicine?
This medicine is for injection into a muscle. It is given by a health-care professional in a hospital or clinic setting.
Talk to your pediatrician regarding the use of this medicine in children. Special care may be needed.

Overdosage: If you think you have taken too much of this medicine contact a poison control center or emergency room at once.

NOTE: This medicine is only for you. Do not share this medicine with others.

What if I miss a dose?
This does not apply.

What should I tell my health care provider before I take this medicine?
They need to know if you have any of these conditions:

- Blood disorders or disease
- Dementia
- Head injury
- Heart disease
- Liver disease
- Parkinson’s disease
- Reye’s syndrome
- Uncontrollable movement disorder
- An unusual or allergic reaction to fluphenazine, other medicines foods, dyes, or preservatives
- Pregnant or trying to get pregnant
- Breast-feeding

What may interact with this medicine?
Do not take this medicine with any of the following medications:

- Amoxapine
- Certain antibiotics like gatifloxacin, grepafloxacin, sparfloxacin
- Cisapride
- Clozapine
- Dofetilide
- Droperidol
- Ephedrine
- Medicines for mental depression like escitalopram, fluoxetine, paroxetine, sertraline
- Ibutilide
- Levomethadyl
- Maprotiline
- Other phenothiazines like chlorpromazine, mesoridazine, prochlorperazine, and thioridazine
- Pimozide
- Pindolol
- Propranolol
- Risperidone
- Sotalol
- Trimethobenzamide
- Ziprasidone

This medicine may also interact with the following medications:

- Atropine
- Some medications for blood pressure or heart problems

This list may not describe all possible interactions. Give your health care provider a list of all the medicines, herbs, non-prescription drugs, or dietary supplements you use. Also tell your health care provider if you smoke, drink alcohol, or use illegal drugs.
them if you smoke, drink alcohol, or use illegal drugs. Some items may interact with your medicine.

What side effects may I notice from receiving this medicine?

Side effects that you should report to your doctor or health care professional as soon as possible:
- Allergic reactions like skin rash, itching or hives, swelling of the face, lips, or tongue
- Blurred vision
- Breast enlargement in men or women
- Breast milk in women who are not breast-feeding
- Chest pain, fast or irregular heartbeat
- Confusion, restlessness
- Dark yellow or brown urine
- Difficulty breathing or swallowing
- Dizziness or fainting spells
- Drooling, shaking
- Fever, chills, sore throat
- Involuntary or uncontrollable movements of the eyes, mouth, head, arms, and legs
- Seizures
- Stomach area pain
- Unusual bleeding or bruising
- Unusually weak or tired
- Yellowing of skin or eyes

Side effects that usually do not require medical attention (report to your doctor or health care professional if they continue or are bothersome):
- Difficulty passing urine
- Difficulty sleeping
- Headache
- Sexual dysfunction

This list may not describe all possible side effects. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

Where should I keep my medicine?

This drug is given in a hospital or clinic and will not be stored at home.

NOTE: This sheet is a summary. It may not cover all possible information. If you have questions about this medicine, talk to your doctor, pharmacist, or health care provider.

What should I watch for while using this medicine?

You may get drowsy or dizzy. Do not drive, use machinery, or do anything that needs mental alertness until you know how this medicine affects you. Do not stand or sit up quickly, especially if you are an older patient. This reduces the risk of dizzy or fainting spells. Alcohol may interfere with the effect of this medicine. Avoid alcoholic drinks.

This medicine can reduce the response of your body to heat or cold. Dress warm in cold weather and stay hydrated in hot weather. If possible, avoid extreme temperatures like saunas, hot tubs, very hot or cold showers, or activities that can cause dehydration such as vigorous exercise.

This medicine can make you more sensitive to the sun. Keep out of the sun. If you cannot avoid being in the sun, wear protective clothing and use sunscreen. Do not use sun lamps or tanning beds/booths.

Your mouth may get dry. Chewing sugarless gum or sucking hard candy, and drinking plenty of water may help. Contact your doctor if the problem does not go away or is severe.

If you are going to have surgery, tell your doctor or health care professional that you are taking this medicine.
